Team ID	xxxxxx
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	**Item to Submit**	**Submitted (Yes / No / NA)**
1	Complete source code (all files and folders)	**Yes**
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	**Yes**
4	Database schema / seed files (if applicable)	**Yes**
5	Environment configuration file (.env.example or similar)	**Yes**

6	Deployed application URL (if hosted)	**Yes**
7	APK / Executable binary (if applicable for mobile/desktop apps)	**NA** (Not applicable for a web application)
8	Dockerfile / Containerization config (if applicable)	**NA** (or Yes if you used Docker)
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	**Yes** (or NA if not required)

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
OptiCrop/
│── frontend/
│── backend/
│── models/
│── static/
│── templates/
│── package.json
│── requirements.txt
│── README.md
│── .env.example
│── app.py
```

Step 3: Deployment / Access Details

Field	**Details**
Hosted / Deployed URL	https://opticrop-smart-agricultural-production-3bxu.onrender.com/

Login (Demo)	NA
Platform Provider	Render
Repository Link	https://github.com/chandrika7177/OptiCrop-Smart-Agricultural-Production-Optimization-Engine
Demo Video Link	: https://drive.google.com/file/d/18onXFq2e8eXrdYUwgixXhqKgQADNo4VY/view?usp=drive_link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Prerequisites

- Python 3.10 or above
- Node.js (if frontend is React)
- Git
- Internet connection

Steps

1. Clone the repository.
2. Install the required dependencies using pip install -r requirements.txt (or npm install).
3. Configure the environment variables in the .env file.
4. Start the backend server.
5. Start the frontend application (if applicable).
6. Open the application in a web browser using the local URL or deployed Render URL.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	First page load may be slow due to Render free server startup	Refresh once after server wakes up
2	Performance depends on internet connectivity	Use a stable internet connection

3	Large image uploads may take longer to process	Optimize image size before uploading
